Tonsil Stones treatment instructions

Perform twice a day - morning and bedtime

STEP 1: Dilute the TheraBreath AktivOxygen solution according to directions on the bottle. **Do not use the AktivOxygen solution undiluted.** Gargle with the diluted AktivOxygen solution for 10-20 seconds, trying to get it as far back in your mouth and throat as possible.

STEP 2: Blow your nose to clear your nasal passages. Tilt your head back and gently squeeze 3-5 drops of TheraBreath Nasal Sinus Drops solution into each nostril. Allow drops to run through your sinuses and down your throat.

Perform throughout the day

STEP 3: Extend the TheraBreath Throat Spray nozzle and spray 4-5 times directly on the back of the throat to help dissolve tonsil stones and neutralize bacteria responsible for their formation.

BONUS ITEM: Once your Tonsil Stones have dissolved, use TheraBreath Dry Mouth Lozenges during the day to maintain a healthy and moist mouth. Your natural salivation process will continue to keep your tonsils clean and reduce further Tonsil Stones formation.

Tips to reduce Tonsil Stones

Brush and floss regularly after meals to eliminate food debris that can lead to Tonsil Stones.

Use TheraBreath Toothpaste and Oral Rinse to reduce the bacteria responsible for Tonsil Stone formation.

Clean your tongue with a tongue cleaner or toothbrush. For best results, apply a bead of TheraBreath Toothpaste to your preferred cleaning device to help fight bacteria as you clean.

See your Dentist regularly. Routine cleanings are necessary to maintain oral health and keep bacteria under control.

Our Guarantee

Every TheraBreath® product is guaranteed to be the most effective oral care product you have ever used. If for any reason you are not 100% satisfied, please contact us for a refund of your purchase price.

What causes Tonsil Stones?

Tonsil stones are caused by the accumulation of bacteria and debris in the tonsils. This debris includes mucus from post nasal drip and other bodily fluids, food particles, and dead skin cells.

The protein-rich debris putrifies at the back of your throat and accumulates in small pockets on the surface of your tonsils called tonsil crypts.

Tonsil stones are a persistent source of bad breath and can sometimes be painful. Some people will catch them up, which can be unpleasant and disconcerting (though typically not a cause for serious alarm.)

CLOSE UP: Tonsil Stones are forming inside tonsil crypts from a combination of bacteria and putrified proteins.
